

SHASHWAT SHARMA

AWS Certified Generative AI Developer - Professional | Solution Architect | Generative AI | Agentic AI | AWS Bedrock | AIOps
+91-8052344445 | shashwat.shaks@gmail.com | Lucknow, India | linkedin.com/in/Shashwat-Sharma-genAI-architect

PROFESSIONAL SUMMARY

Solution Architect with 13+ years of experience designing enterprise technology solutions across automation, data platforms, IT operations, and Generative AI. Recent work focuses on Agentic AI, RAG-based knowledge systems, incident intelligence, RCA automation, AI-powered ticket analytics, and self-service operations. I combine hands-on engineering depth with stakeholder-facing architecture: understanding the process, shaping practical solution patterns, building credible prototypes, and designing production readiness, reuse, governance, and scale.

EXECUTIVE IMPACT SNAPSHOT

- Conceptualized and delivered Operations-as-Self-Service / SSU automation for data fixes, change requests, DR drills, and support operations, producing documented outcomes of 20-35% reduction in manual effort, 25-40% faster cycle times, and 15-25% improvement in SLA adherence.
- Designed an Incident RCA Intelligence architecture that uses Teams call transcripts, extracts incident facts, drafts RCA content, and supports quality review, reducing dependence on manual post-incident documentation and improving RCA consistency.
- Solutioned AI-powered ticket analytics to identify recurring incidents, operational hotspots, automation candidates, and quality issues, helping leadership focus reliability improvement efforts on high-impact areas.
- Designed RAG-based enterprise Q&A patterns for runbooks, operational documents, databases, and support repositories, enabling faster discovery of answers from internal knowledge assets.
- Managed and mentored 15+ associates while enabling adoption of automation, GenAI use cases, prompt engineering patterns, and AI-assisted operations across delivery teams.

TECHNICAL STRENGTHS

Generative AI Architecture | Agentic AI | AI Agents | AWS Bedrock | AWS SageMaker | RAG | Prompt Engineering | LLM Applications | Knowledge Bases | Semantic Search | Vector Databases | AI Evaluation | AI Governance | Solution Architecture | Technical Strategy | POCs | Reference Architectures | Enterprise Automation | AIOps | Incident Management | RCA Automation | Ticket Analytics | Runbook Automation | Oracle DBA | PostgreSQL | PL/SQL | SQL | Data Architecture | Data Modelling | Jenkins | Shell Scripting | Linux | Informatica PowerCenter | AppDynamics | Elasticsearch | Tableau

PROFESSIONAL EXPERIENCE

Tata Consultancy Services Limited - Solution Architect / Product Manager | Nov 2017 - Present

- Architect enterprise-scale automation and AI-driven solutions for incident management, service delivery, database operations, monitoring, runbook execution, and operational knowledge discovery.
- Blend GenAI deployment thinking into existing operations by connecting business workflows, data sources, monitoring systems, knowledge repositories, and self-service execution patterns.
- Led process re-imagining of legacy workflows, replacing manual operational toil with standardized automation patterns designed for scale, resilience, auditability, and future GenAI readiness.
- Created reusable self-service utility ecosystems across application lifecycle events including data fixes, change requests, DR drill processes, and operational support activities.
- Built and implemented in-house real-time database monitoring/APM capability, improving observability and proactive issue identification for database-backed enterprise platforms.
- Act as a trusted technical counterpart for business and technology stakeholders by converting strategic objectives into solution designs, delivery plans, implementation guidance, and adoption support.

Lead Database Architect - Project Resource Management, TCS Internal | Nov 2015 - Oct 2017

- Led Oracle Apps 11i reverse engineering, data model development, PL/SQL architecture, capacity planning, archiving, purging, partitioning, and information lifecycle management for enterprise systems.
- Worked directly with business users to understand requirements, analyze process gaps, and translate functional needs into scalable database and application design components.

Lead ETL Developer / Senior Database Developer | Sep 2012 - Oct 2015

- Designed and built ETL integrations using Informatica PowerCenter, including PostgreSQL HR to Oracle Payroll integration, performance tuning, data quality checks, and delivery governance.
- Developed database models, reports, PL/SQL packages, procedures, functions, triggers, and optimized SQL batches for internal enterprise applications.

CERTIFICATIONS

- AWS Certified Generative AI Developer - Professional (AIP-C01)
- AWS Solution Architect - Associate.
- GSDC Site Reliability Engineering (SRE) Foundation Certification
- Oracle PL/SQL Developer Certified - Associate

EDUCATION

- Bachelor of Technology, Computer Science & Engineering - Northern India Engineering College, Lucknow, 2011.
